3. Installing GFxIME 7

Running the IME enabled Scaleform Player 7

1. Overview

This document describes how to use GFxIME to start typing text in Asian languages. GFxIME provides a highly customizable interface for using IME (Input Method Editor) which are programs that allow users to type in East Asian languages using a standard keyboard. These languages can have large character sets that cannot be easily mapped to keyboard keys. To address this, IME programs assist text entry by displaying suggestions and modifying the input string as it is being typed. This document will describe how to install a few IME's and use them in Scaleform Player. After reading this document, you should be able to type "nihao" using Chinese Simplified Quan Pin IME.

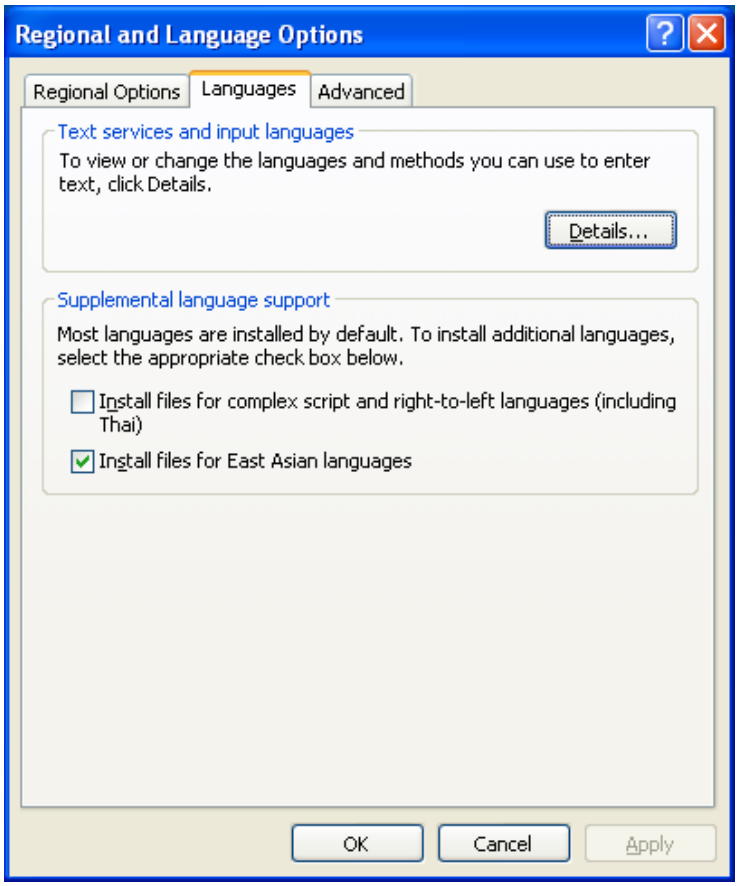

2. Installing IMEs

If you are a user who is accustomed to typing in Asian languages, you probably already have some IME's installed. In this section we assume that you don't know much about IME's and haven't used them before. Therefore, you don't have any IME's installed on your computer.

Installation of IME's works differently on Windows XP than on Windows Vista. We first describe the installation procedure of Chinese Simplified (Quan Pin) IME on Windows XP followed by the procedure on Windows Vista.

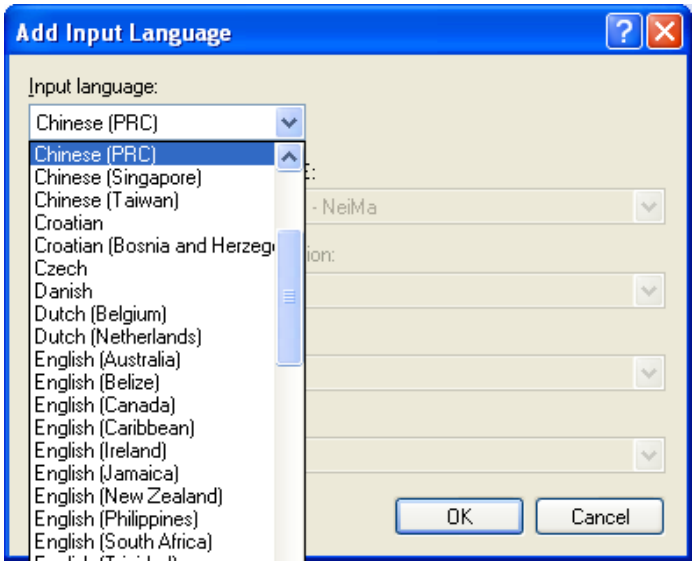

Windows XP Installation

- Double click *Start->Control Panel-> Regional and Language Options* icon.
- Click on the "*Languages*" tab
- Click on *Install files for East Asian Languages*. At this point, you might be asked to insert your Windows XP installation CD.

- Once you are done with installing East Asian languages, click on *Details*.

- Click on the *Add*, this should open up another Dialog- in the *Input Language* dropdown, select Chinese (PRC).

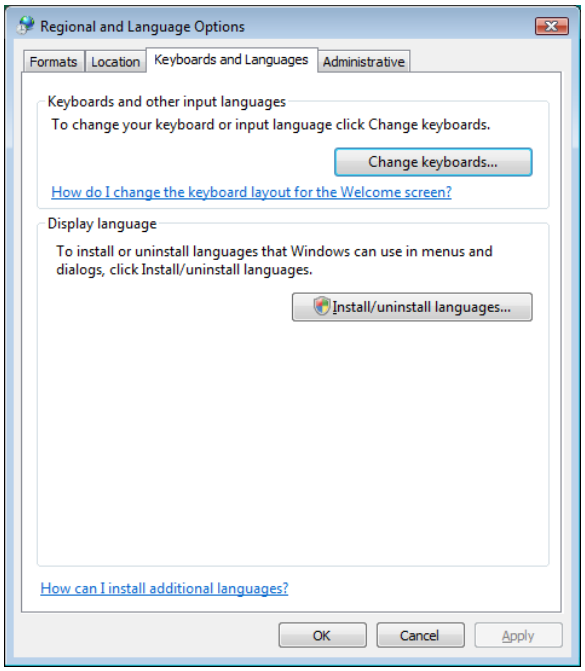

- Check the Keyboard layout/IME checkbox and in the drop down select Chinese (Simplified) - Quan Pin.
- Click OK on all the dialog boxes.

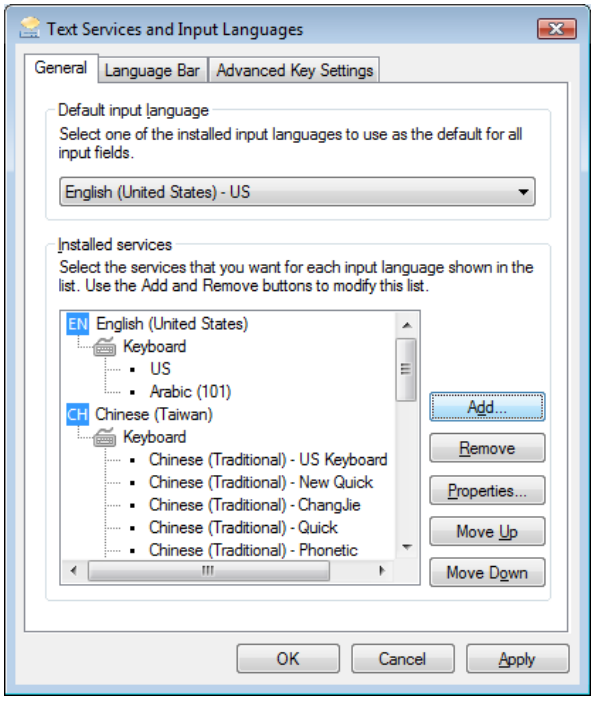

Windows Vista

Installing IME's on Windows Vista is much easier since the font and ime files are already on the system and nothing needs to be copied.

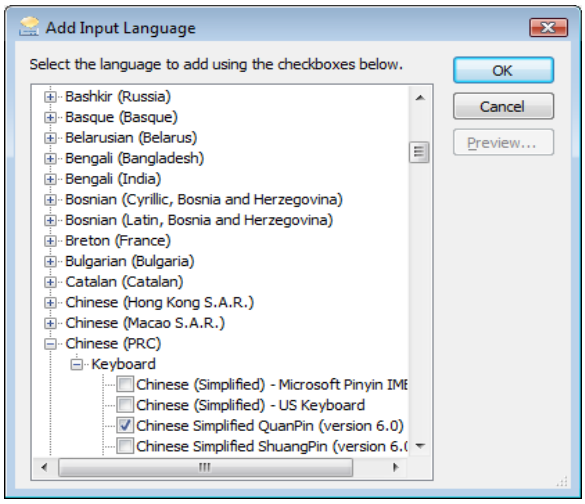

- Open *Start->Settings->Control Panel*, click *Regional and Language Options* then click *Keyboards and Languages.*

- Click on *Change keyboards.*

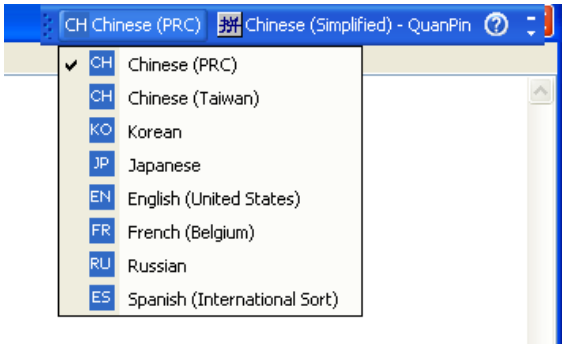

- Click on *Add*
- In the drop down list, select Chinese (PRC) as the input language and Chinese Simplified Quan Pin (Version 6.0) for the IME. Click *OK* through the rest of the dialog boxes.

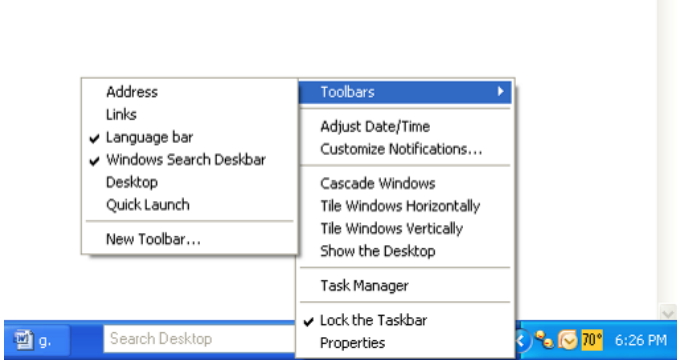

Testing the IME in Notepad

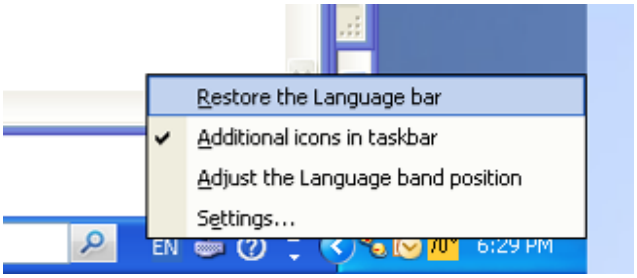

You should now have the Chinese (Simplified) Quan Pin IME installed. To test this, open Notepad and using the language bar, select the Chinese (PRC) input language and Chinese (Simplified) QuanPin IME from the IME dropdown. The screenshots that follow pertain to Windows XP and look very similar on Vista.

If you haven't used the language bar before, it is a floating toolbar that allows you to switch input languages and IME's. If you don't see the language bar, click on the bottom right of your desktop

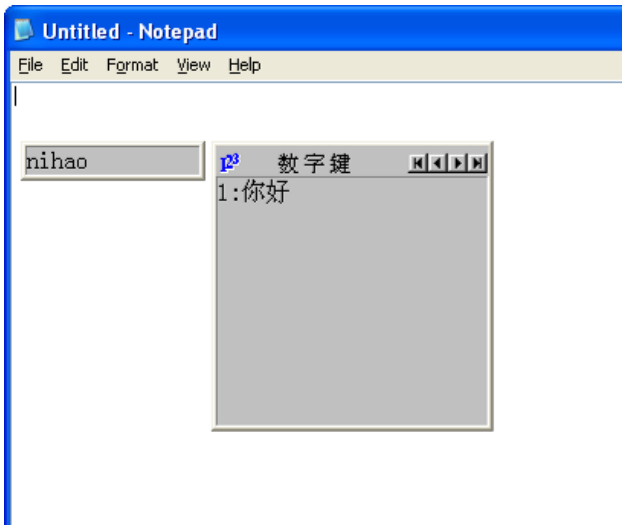

This will normally create the language bar integrated with your taskbar. If you prefer to have a floating language bar,

Right click on the *Language* ("*En*" as shown in the figure above) icon and check "*Restore the Language bar*".

Now, in Notepad, type "nihao". You should see the following:

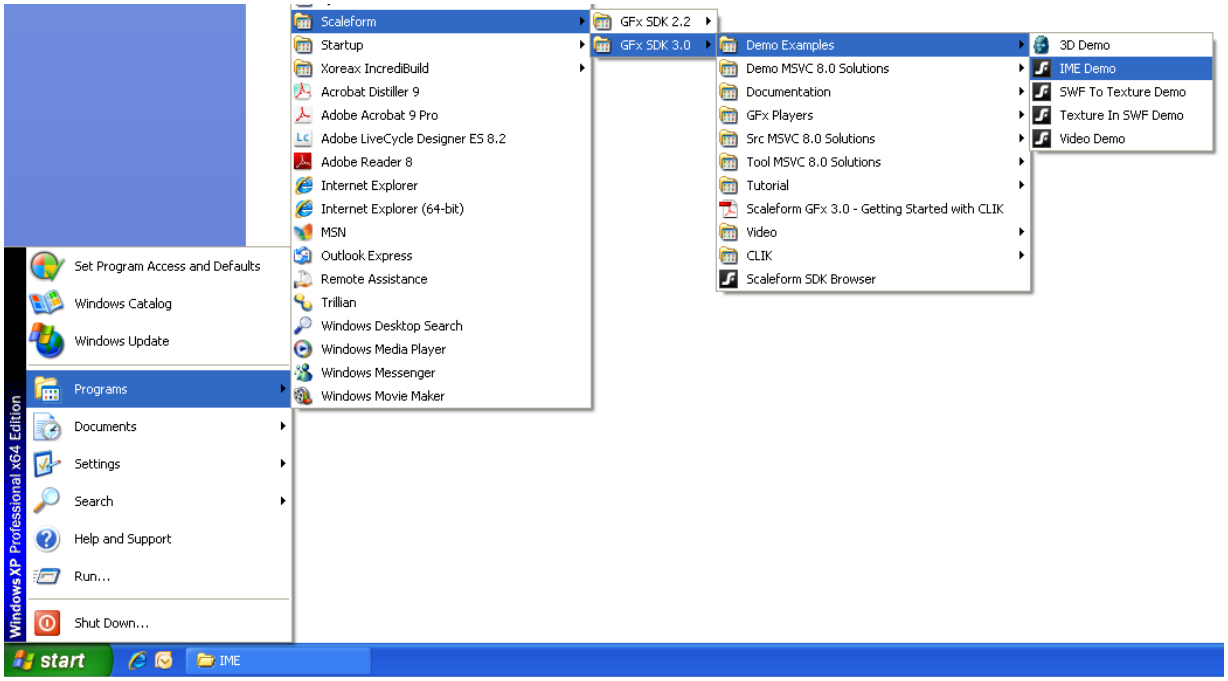

3. Installing GFxIME

In order to use IME, you should have the base version of Scaleform installed. To enable IME, you need to install the IME package available from our download site at https://developer.scaleform.com/gfx?action=dl

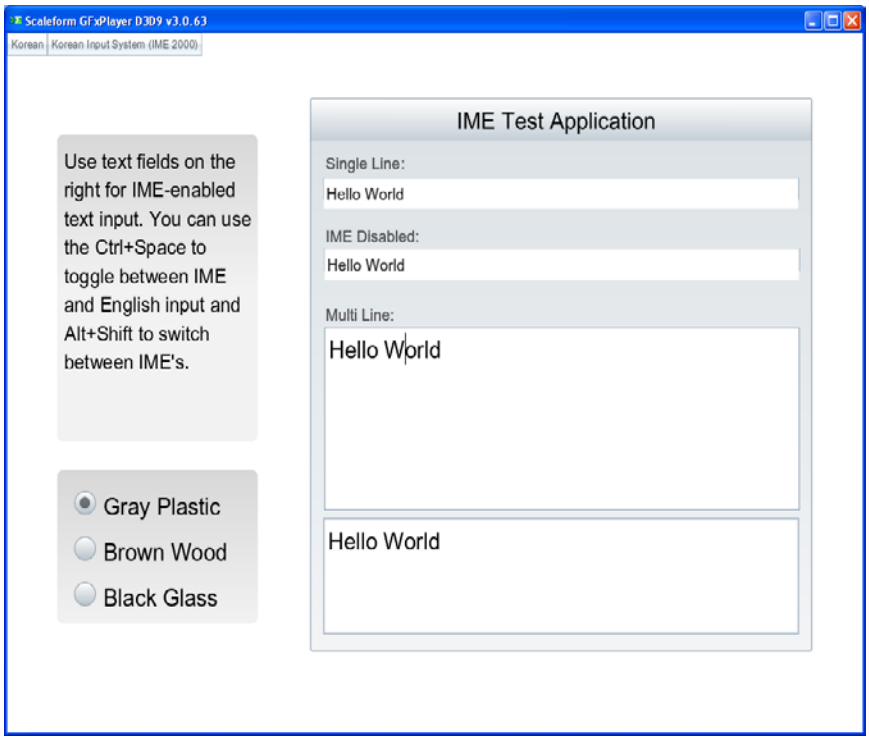

The package will be named similar to gfx_4.0.xx_lib_ime_msvc80.exe. Once the installation is complete, you'll be able to run an IME enabled Scaleform Player.

Running the IME enabled Scaleform Player

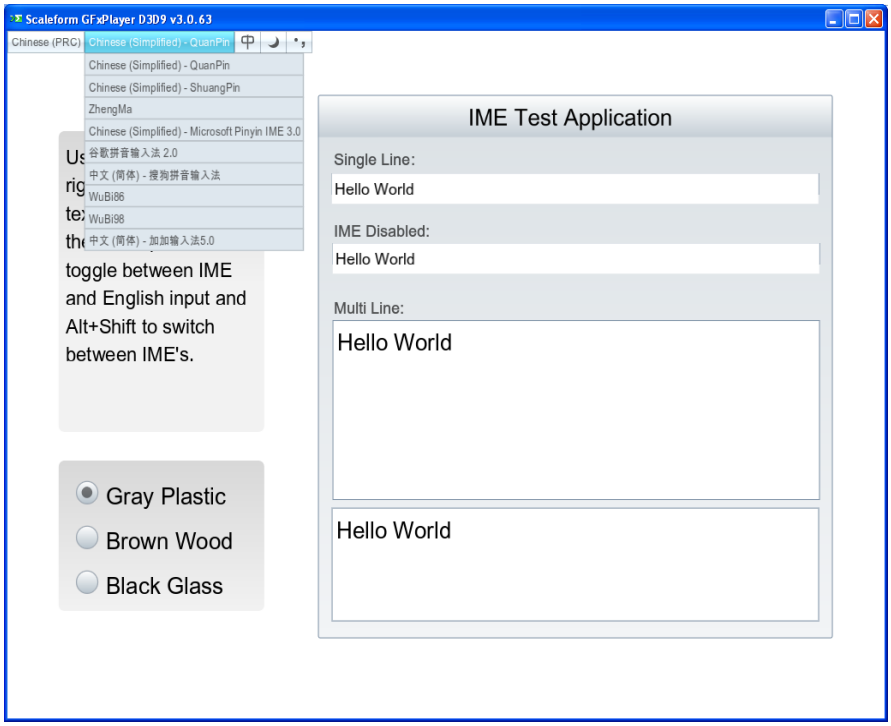

Once you have installed GFxIME, click on *Start->All Programs->Scaleform->GFx SDK 4.0->Demo Examples-> IME Demo.*

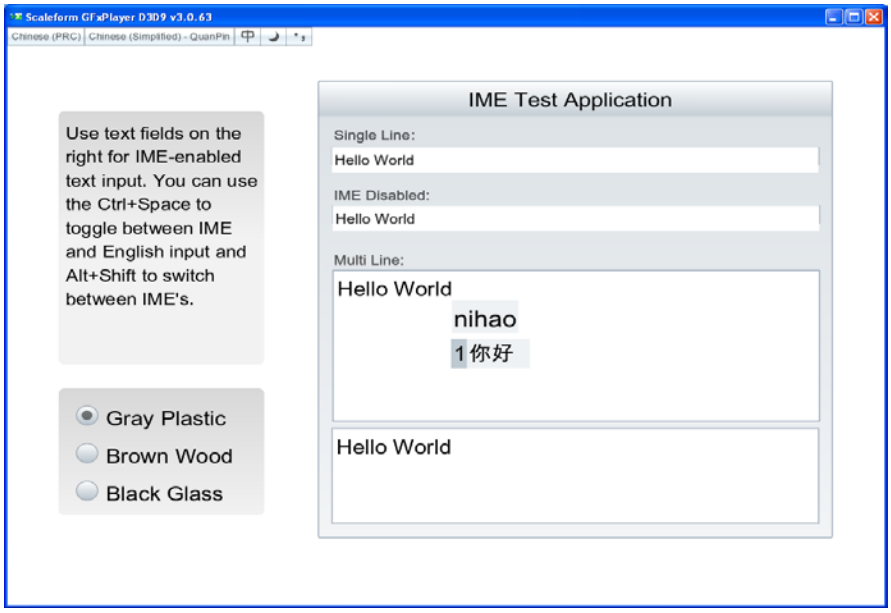

You should see the following:

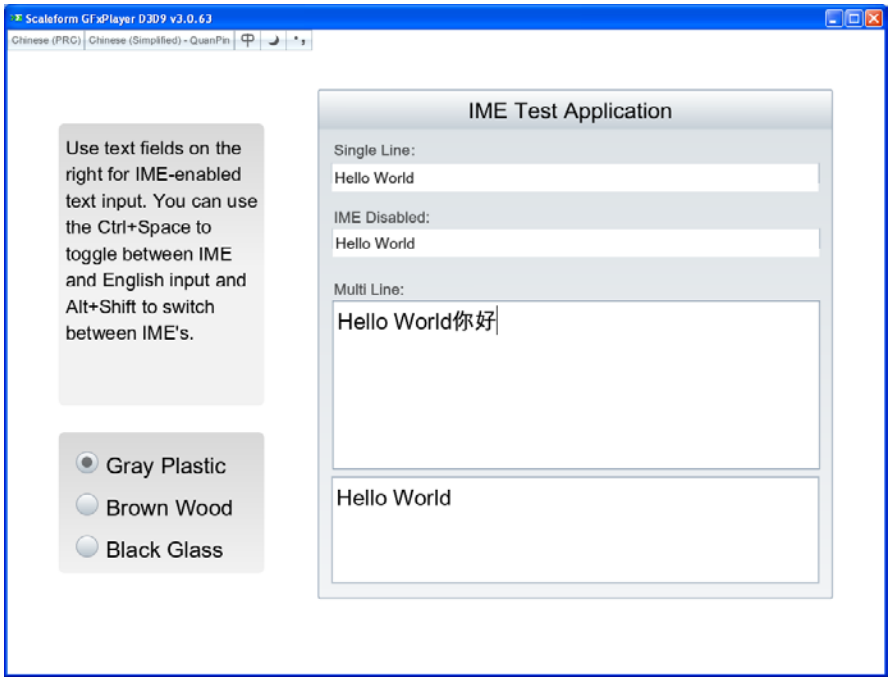

Note that the input language on the language bar will be the default input language on your computer. Use the Scaleform Language bar or the Windows Language bar to switch to Chinese (PRC) input language and Chinese (Simplified) - QuanPin IME

Now type “nihao” in the first Multi Line textfield:

Push space:

Congratulations! You have typed your first Chinese characters using GFxIME!
